Health Officer's Report

During 1921 the following communicable diseases have been reported from Rutland Town.—

Chicken pox 5, measles 1, scarlet fever 1, typhoid fever 8.

During the school year 197 children have been inspected in the schools, 133 found defective. Of the defective 123 had defective teeth, vision 21, throat 26, nose 2, enlarged thyroid 1.

Most people neglect the "milk teeth" of children. Many children are found with chronic abscesses at the root and the child is swallowing pus all of the time. Any badly decayed tooth may become in this condition. The "six-year-molar," the first double tooth to come, back of the temporary, is very often found too far gone to be filled and this tooth never comes again. This is too often regarded as a temporary tooth and neglected. The health of the child depends much on the teeth and it is hoped next inspection will find many corrected.

Respectfully submitted,

BERN D. COLBY, M.D.

Health Officer, Dist. No. 7.
